Data Quality Problems

- Missing
  - Easy to find, NaNs
- Duplicated
  - Easy to find, hard to verify
- Noise or Outlier
  - Hard to define
  - Hard to catch

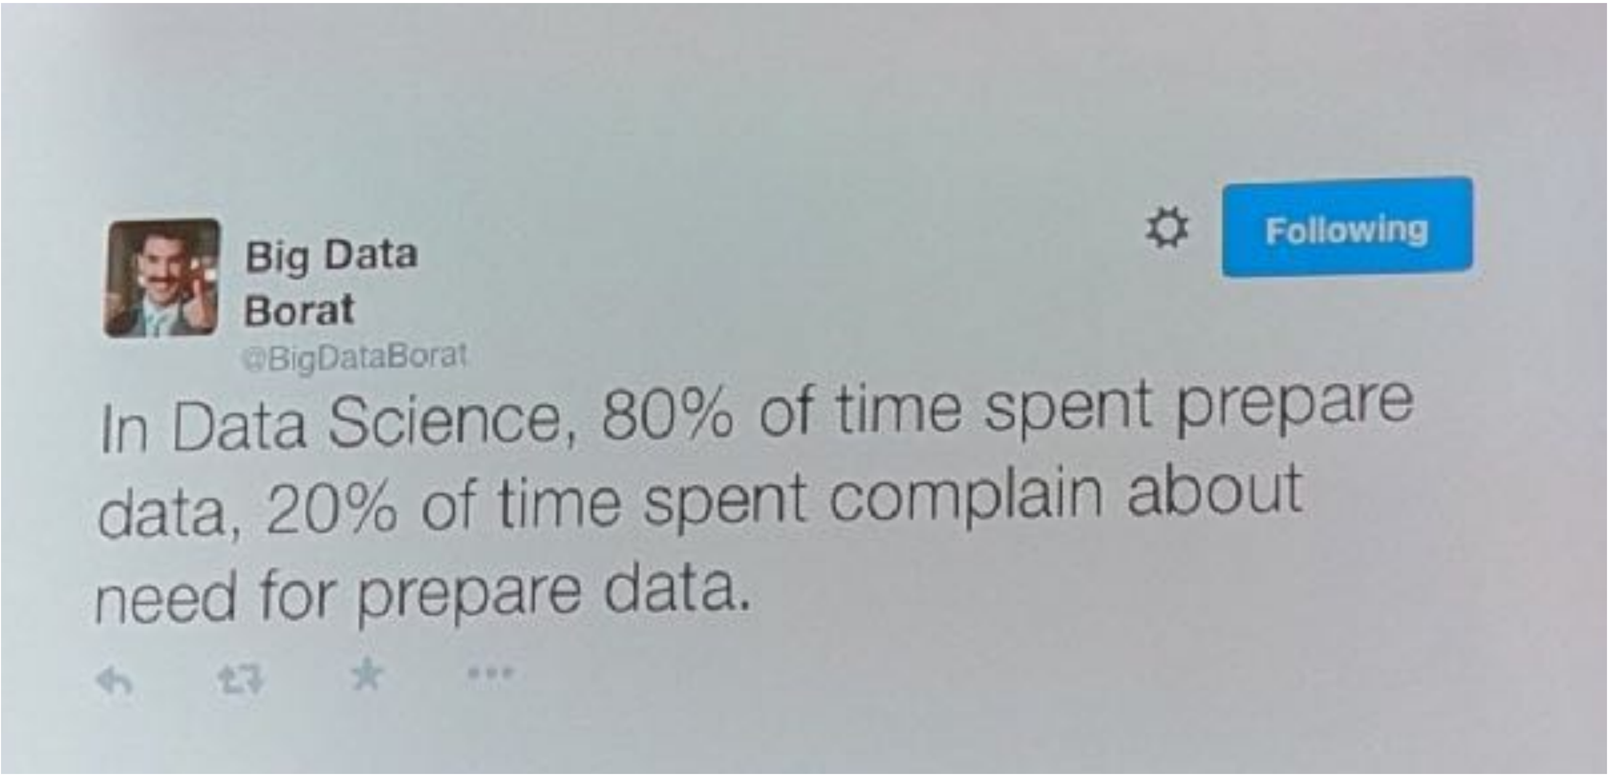
4	?	28.1	21-30	negative	(4.8 + 1)/2

Imputed Age: 21-30

How to calculate distance?

- Difference for valid features only
- May need to normalize ranges
- Or weight neighbors differently
- Or have min # of valid features
- Euclidean, city-block, etc.

Data Representation and Documents



Feature Type Representation Review

	Attribute	Representation Transformation	Comments
Discrete	Nominal	Any permutation of values one hot encoding or hash function	If all employee ID numbers were reassigned, would it make any difference?
	Ordinal	An order preserving change of values, i.e., new_value = f(old_value) where f is a monotonic function. integer	An attribute encompassing the notion of good, better best can be represented equally well by the values {1, 2, 3} or by { 0.5, 1, 10}.
Continuous	Interval	new_value =a * old_value + b where a and b are constants float	Thus, the Fahrenheit and Celsius temperature scales differ in terms of where their zero value is and the size of a unit (degree).
	Ratio	new_value = a * old_value float	Length can be measured in meters or feet.

what happens when we get more words?

TID	Slee	Fati	Wei	Ras	First	Sigh	Why	Fox	Bro	Lazy	Dog	Etc	Stev

3	1	1	0	2	1	1	1	0	1	0	0	1	0

or we could have a hashing function, h(x) = y

	h(x)=1	h(x)=2	h(x)=3	h(x)=4	h(x)=5	h(x)=6
1	0	1	0	1	2	0
2	1	1	4	0	2	1
3	2	1	1	2	1	1
